

Stevens Research Network

Research Centers and Labs - Overview Table

Research Center/Lab	Description	Details
Center for Complex Systems & Enterprises	Stevens Institute of Technology is a student-centric research university, with technology at its core. Our three schools and one college uniquely prepare students for bright futures in diverse fields including tech, finance, medicine, energy, engineering — even art and music.	Research: Research with real-world application is at the core of the Center for Complex Systems & Enterprises' (CCSE's) interdisciplinary study of complex enterprise systems. Admission & Aid: Research with real-world application is at the core of the Center for Complex Systems & Enterprises' (CCSE's) interdisciplinary study of complex enterprise systems. Undergraduate Admissions: Research with real-world application is at the core of the Center for Complex Systems & Enterprises' (CCSE's) interdisciplinary study of complex enterprise systems. Graduate Admissions: Research with real-world application is at the core of the Center for Complex Systems & Enterprises' (CCSE's) interdisciplinary study of complex enterprise systems. Mission: Founded in 2012, CCSE engages industry, government and academia to confront complex enterprise problems and engineer a better future with an enhanced quality of life. The emergent research addresses inter and transdisciplinary issues

		through evidence-based, unbiased, improved decision-making across four key domains: aerospace & defense, artificial intelligence (AI)/machine learning applications, healthcare and transportation & logistics. CCSE develops computational models and prototypes of complex enterprises to enable business leaders and policymakers to evaluate how their potential decisions will affect stakeholders, identify unbeneficial moves, examine alternatives and translate data into impactful next steps. CCSE drives the rapid conceptualization, development and validation of multi-level computational models that make improvements to these complex systems possible. RESEARCH FOCI: CCSE's research addresses complex real-world issues with the aim of enabling better decision-making and developing trustworthy systems for a progressing, evolving future. Our research portfolio, embedded in data-driven techniques, spans thematic areas that are either intrinsically complex and/or provide the conceptual elements to address complexity. Research is based on real-world needs across our primary areas of interest: artificial

		intelligence/machine learning, aerospace & defense, healthcare and transportation & logistics.
Center for Quantum Science and Engineering	Stevens Institute of Technology is a student-centric research university, with technology at its core. Our three schools and one college uniquely prepare students for bright futures in diverse fields including tech, finance, medicine, energy, engineering — even art and music.	Research: The Center for Quantum Science and Engineering (CQSE) at Stevens pursues innovative quantum engineering research, development and education, including bringing photonic technologies into reality, networking, remote sensing, machine learning, big data processing and quantum computing. Admission & Aid: The Center for Quantum Science and Engineering (CQSE) at Stevens pursues innovative quantum engineering research, development and education, including bringing photonic technologies into reality, networking, remote sensing, machine learning, big data processing and quantum computing. Undergraduate Admissions: The Center for Quantum Science and Engineering (CQSE) at Stevens pursues innovative quantum engineering research, development and education, including bringing photonic technologies into reality, networking, remote sensing, machine learning, big data processing and quantum computing. Graduate Admissions: The Center for Quantum Science and Engineering (CQSE) at Stevens pursues innovative quantum engineering research, development and

		education, including bringing photonic technologies into reality, networking, remote sensing, machine learning, big data processing and quantum computing. Our Mission: The Center for Quantum Science and Engineering (CQSE) focuses on developing and industrializing interdisciplinary photonic technologies that will create impact in multiple areas of society, by: Our Research: The Center for Quantum Science and Engineering takes a cross-disciplinary approach to developing quantum computers that satisfy practical criteria. At Stevens, the CQSE conducts research in reduced-dimensional materials, nanophotonics, cybersecurity, quantum control, ultrafast optics and a variety of other applications. 		graduate program in the Department of Civil, Environmental and Ocean Engineering. Stevens Environmental Engineering Researchers are Using Plants to Mine Nickel: Stevens has a proud history of working closely with public and private sector organizations and as a trusted partner in professional development, corporate education, and online program delivery. Whatever your organization's goals are, Stevens is eager to collaborate. Record Research Activity for Stevens, Once Again: Stevens has a proud history of working closely with public and private sector organizations and as a trusted partner in professional development, corporate education, and online program delivery. Whatever your organization's goals are, Stevens is eager to collaborate.
Stevens Institute for Artificial Intelligence	Stevens Institute of Technology is a student-centric research university, with technology at its core. Our three schools and one college uniquely prepare students for bright futures in diverse fields including tech, finance, medicine, energy, engineering — even art and music.	Research: The Stevens Institute for Artificial Intelligence (SIAI) is an interdisciplinary, tech-driven collaboration of engineering, business, systems and design experts working toward solving pressing global problems in industry and the world. Admission & Aid: The Stevens Institute for Artificial Intelligence (SIAI) is an interdisciplinary, tech-driven collaboration of engineering, business,

		systems and design experts working toward solving pressing global problems in industry and the world. Undergraduate Admissions: The Stevens Institute for Artificial Intelligence (SIAI) is an interdisciplinary, tech-driven collaboration of engineering, business, systems and design experts working toward solving pressing global problems in industry and the world. Graduate Admissions: The Stevens Institute for Artificial Intelligence (SIAI) is an interdisciplinary, tech-driven collaboration of engineering, business, systems and design experts working toward solving pressing global problems in industry and the world. AI and Machine Learning Research at Stevens: The Stevens Institute for Artificial Intelligence advances the fundamentals and applications of artificial intelligence and machine learning research to solve complex problems that advance technology — and make the world a better place. Launched in 2018, SIAI is Stevens’ newest and largest center. It is comprised of engineering, business, systems and design experts from across the university who share a collaborative research. Our Research Focus Areas: SIAI serves as an anchor for cross-disciplinary collaboration at Stevens, demonstrating the expertise of numerous affiliated
--	--	---

		faculty who are working to make AI research a pillar of strength and specialization for the university and it provides a hub for Stevens' wide range of AI education and outreach programs. Our faculty research falls in the following areas: Brendan Englot, SIAI Director: Dr. Brendan Englot, Professor of Mechanical Engineering and SIAI Director, has fifteen years of experience developing and deploying mobile robots and autonomous navigation algorithms via land, air and sea. His research uses artificial intelligence to improve the situational awareness of mobile robots operating in degraded conditions, and to enable intelligent robot decision-making under uncertainty. His work in A.I. is supported by the National Science Foundation, the Office of Naval Research, the U.S. Army, and various sponsors in industry. SIAI Event Showcases Student, Faculty AI Research, Unveils New Mission: Welcome remarks, student research, faculty demos and lecture from industry fuel SIAI's broadened charge to create AI for societal good
New Jersey Center for Microchemical Systems	Stevens Institute of Technology is a student-centric research university, with technology at its core. Our three schools and one college uniquely prepare students for bright futures	Research: Since its foundation in 2002, the New Jersey Center for MicroChemical Systems (NJCMCS) has provided a nationally unique research frontier for exploring

Detailed Information

Center for Complex Systems & Enterprises

Description: Stevens Institute of Technology is a student-centric research university, with technology at its core. Our three schools and one college uniquely prepare students for bright futures in diverse fields including tech, finance, medicine, energy, engineering — even art and music.

Additional Details:

Research: Research with real-world application is at the core of the Center for Complex Systems & Enterprises' (CCSE's) interdisciplinary study of complex enterprise systems.

Admission & Aid: Research with real-world application is at the core of the Center for Complex Systems & Enterprises' (CCSE's) interdisciplinary study of complex enterprise systems.

Undergraduate Admissions: Research with real-world application is at the core of the Center for Complex Systems & Enterprises' (CCSE's) interdisciplinary study of complex enterprise systems.

Graduate Admissions: Research with real-world application is at the core of the Center for Complex Systems & Enterprises' (CCSE's) interdisciplinary study of complex enterprise systems.

Mission: Founded in 2012, CCSE engages industry, government and academia to confront complex enterprise problems and engineer a better future with an enhanced quality of life. The emergent research addresses inter and transdisciplinary issues through evidence-based, unbiased, improved decision-making across four key domains: aerospace & defense, artificial intelligence (AI)/machine learning applications, healthcare and transportation & logistics. CCSE develops computational models and prototypes of complex enterprises to enable business leaders and policymakers to evaluate how their potential decisions will affect stakeholders, identify unbeneficial moves, examine alternatives and translate data into impactful next steps. CCSE drives the rapid conceptualization, development and validation of multi-level computational models that make improvements to these complex systems possible.

RESEARCH FOCI: CCSE's research addresses complex real-world issues with the aim of enabling better decision-making and developing trustworthy systems for a progressing, evolving future. Our research portfolio, embedded in data-driven techniques, spans thematic areas that are either intrinsically complex and/or provide the conceptual elements to address complexity.

Research is based on real-world needs across our primary areas of interest: artificial intelligence/machine learning, aerospace & defense, healthcare and transportation & logistics.

Center for Quantum Science and Engineering

Description: Stevens Institute of Technology is a student-centric research university, with technology at its core. Our three schools and one college uniquely prepare students for bright futures in diverse fields including tech, finance, medicine, energy, engineering — even art and music.

Additional Details:

Research: The Center for Quantum Science and Engineering (CQSE) at Stevens pursues innovative quantum engineering research, development and education, including bringing photonic technologies into reality, networking, remote sensing, machine learning, big data

processing and quantum computing.

Admission & Aid: The Center for Quantum Science and Engineering (CQSE) at Stevens pursues innovative quantum engineering research, development and education, including bringing photonic technologies into reality, networking, remote sensing, machine learning, big data processing and quantum computing.

Undergraduate Admissions: The Center for Quantum Science and Engineering (CQSE) at Stevens pursues innovative quantum engineering research, development and education, including bringing photonic technologies into reality, networking, remote sensing, machine learning, big data processing and quantum computing.

Graduate Admissions: The Center for Quantum Science and Engineering (CQSE) at Stevens pursues innovative quantum engineering research, development and education, including bringing photonic technologies into reality, networking, remote sensing, machine learning, big data processing and quantum computing.

Our Mission: The Center for Quantum Science and Engineering (CQSE) focuses on developing and industrializing interdisciplinary photonic technologies that will create impact in multiple areas of society, by:

Our Research: The Center for Quantum Science and Engineering takes a cross-disciplinary approach to developing quantum computers that satisfy practical criteria. At Stevens, the CQSE conducts research in reduced-dimensional materials, nanophotonics, cybersecurity, quantum control, ultrafast optics and a variety of other applications.

Center for Decision Technologies

Description: Stevens Institute of Technology is a student-centric research university, with technology at its core. Our three schools and one college uniquely prepare students for bright futures in diverse fields including tech, finance, medicine, energy, engineering — even art and music.

Additional Details:

Research: The largest research center at the School of Business, the Center for Decision Technologies investigates projects related to the improvement of decision making. Faculty in the center explore decision-making through disciplines such as system design development, social network use and crowdsourcing. Research focuses on better understanding the networks that are around us and within us, because understanding these networks can help us build technologies that augment decision-making. This work combines perspectives from information systems, cognitive psychology, social network analysis and various computational sciences.

Admission & Aid: The largest research center at the School of Business, the Center for Decision Technologies investigates projects related to the improvement of decision making. Faculty in the center explore decision-making through disciplines such as system design

development, social network use and crowdsourcing. Research focuses on better understanding the networks that are around us and within us, because understanding these networks can help us build technologies that augment decision-making. This work combines perspectives from information systems, cognitive psychology, social network analysis and various computational sciences.

Johannes Weickenmeier Receives \$837,467 as Part of a NIH-Funded Research Program Led by UC Davis to Examine the Link Between White Matter Lesions and Cognitive Decline: The Center For Neuromechanics brings scientists and clinicians across different disciplines together to study the mechanical behavior of the central nervous system. Our center activities are currently being sponsored by grants from National Science Foundation, National Institutes of Health, Department of Defense, and New Jersey Health Foundation totaling nearly \$4 Million.

Research at the Center for Neuromechanics: The Center For Neuromechanics brings scientists and clinicians across different disciplines together to study the mechanical behavior of the central nervous system. Our center activities are currently being sponsored by grants from National Science Foundation, National Institutes of Health, Department of Defense, and New Jersey Health Foundation totaling nearly \$4 Million.

The center's research efforts focus on four key topics:: Computational Biomechanics and Tissue Characterization

CRAFT

Description: Stevens Institute of Technology is a student-centric research university, with technology at its core. Our three schools and one college uniquely prepare students for bright futures in diverse fields including tech, finance, medicine, energy, engineering — even art and music.

Graduate Admissions:

The first fintech-focused Industry University Cooperative Research center funded by NSF:

Davidson Laboratory

Description: Stevens Institute of Technology is a student-centric research university, with technology at its core. Our three schools and one college uniquely prepare students for bright futures in diverse fields including tech, finance, medicine, energy, engineering — even art and music.

Additional Details:

Research: The Davidson Laboratory at Stevens Institute of Technology is a global leader in delivering new knowledge, advanced technologies and higher education in support of

forecasting for extreme weather events, coastal resilience and marine hydrodynamics.

Admission & Aid: The Davidson Laboratory at Stevens Institute of Technology is a global leader in delivering new knowledge, advanced technologies and higher education in support of forecasting for extreme weather events, coastal resilience and marine hydrodynamics.

Undergraduate Admissions: The Davidson Laboratory at Stevens Institute of Technology is a global leader in delivering new knowledge, advanced technologies and higher education in support of forecasting for extreme weather events, coastal resilience and marine hydrodynamics.

Graduate Admissions: The Davidson Laboratory at Stevens Institute of Technology is a global leader in delivering new knowledge, advanced technologies and higher education in support of forecasting for extreme weather events, coastal resilience and marine hydrodynamics.

Our Research: We devise globally-applicable solutions to critical infrastructure and urban systems problems in and around New York Harbor. Our resilience projects are designed to change the status quo.

Muhammad Hajj, Director: The Davidson Laboratory is directed by Department of Civil, Environmental and Ocean Engineering Chair and George Meade Bond Professor Muhammad Hajj. For inquiries about collaboration with our research contact:

Creating Impact through Research: Research at the Hanlon Financial Systems Center spans areas ranging from financial engineering, statistics and econometrics to electrical engineering, artificial intelligence and cognitive computing.

Highly Filled Materials Institute (HfMI)

Description: Stevens Institute of Technology is a student-centric research university, with technology at its core. Our three schools and one college uniquely prepare students for bright futures in diverse fields including tech, finance, medicine, energy, engineering — even art and music.

Additional Details:

Research: The mission of the HfMI is advance its position as the premier research laboratory focused on highly filled suspensions (suspensions that are filled with solids at concentration that approach the maximum packing fraction of the solid phase).

Admission & Aid: The mission of the HfMI is advance its position as the premier research laboratory focused on highly filled suspensions (suspensions that are filled with solids at concentration that approach the maximum packing fraction of the solid phase).

Undergraduate Admissions: The mission of the HfMI is advance its position as the premier research laboratory focused on highly filled suspensions (suspensions that are filled with solids at concentration that approach the maximum packing fraction of the solid phase).

Graduate Admissions: The mission of the HfMI is advance its position as the premier research laboratory focused on highly filled suspensions (suspensions that are filled with solids at concentration that approach the maximum packing fraction of the solid phase).

Our Mission: The mission of the HfMI is advance its position as the premier research laboratory focused on highly filled suspensions (suspensions that are filled with solids at concentration that approach the maximum packing fraction of the solid phase).

Stevens Center for Sustainability

Description: Stevens Institute of Technology is a student-centric research university, with technology at its core. Our three schools and one college uniquely prepare students for bright futures in diverse fields including tech, finance, medicine, energy, engineering — even art and music.

Additional Details:

Research: Every day, Stevens researchers are developing sustainable solutions for our planet's future, including green remediation technologies, sustainable materials, smarter power grids, better batteries and renewable energy sources.

Admission & Aid: Every day, Stevens researchers are developing sustainable solutions for our planet's future, including green remediation technologies, sustainable materials, smarter power grids, better batteries and renewable energy sources.

Undergraduate Admissions: Every day, Stevens researchers are developing sustainable solutions for our planet's future, including green remediation technologies, sustainable materials, smarter power grids, better batteries and renewable energy sources.

Graduate Admissions: Every day, Stevens researchers are developing sustainable solutions for our planet's future, including green remediation technologies, sustainable materials, smarter power grids, better batteries and renewable energy sources.

A Sustainable Summer of Research: Under the direction of Dr. Chang Hwan Choi, environmental engineering major Harrison Hinojosa participated in the inaugural Summer Undergraduate Research Program funded by the PSEG Foundation, creating practical, sustainable solutions to a common problem: water pressure.

Dibs Sarkar, Director, Stevens Center for Sustainability: Dibyendu "Dibs" Sarkar is a professor of environmental engineering at Stevens Institute Technology and founding director of the Sustainability Management graduate program in the Department of Civil,

Environmental and Ocean Engineering.

Stevens Environmental Engineering Researchers are Using Plants to Mine Nickel: Stevens has a proud history of working closely with public and private sector organizations and as a trusted partner in professional development, corporate education, and online program delivery. Whatever your organization's goals are, Stevens is eager to collaborate.

Record Research Activity for Stevens, Once Again: Stevens has a proud history of working closely with public and private sector organizations and as a trusted partner in professional development, corporate education, and online program delivery. Whatever your organization's goals are, Stevens is eager to collaborate.

Stevens Institute for Artificial Intelligence

Description: Stevens Institute of Technology is a student-centric research university, with technology at its core. Our three schools and one college uniquely prepare students for bright futures in diverse fields including tech, finance, medicine, energy, engineering — even art and music.

Additional Details:

Research: The Stevens Institute for Artificial Intelligence (SIAI) is an interdisciplinary, tech-driven collaboration of engineering, business, systems and design experts working toward solving pressing global problems in industry and the world.

Admission & Aid: The Stevens Institute for Artificial Intelligence (SIAI) is an interdisciplinary, tech-driven collaboration of engineering, business, systems and design experts working toward solving pressing global problems in industry and the world.

Undergraduate Admissions: The Stevens Institute for Artificial Intelligence (SIAI) is an interdisciplinary, tech-driven collaboration of engineering, business, systems and design experts working toward solving pressing global problems in industry and the world.

Graduate Admissions: The Stevens Institute for Artificial Intelligence (SIAI) is an interdisciplinary, tech-driven collaboration of engineering, business, systems and design experts working toward solving pressing global problems in industry and the world.

AI and Machine Learning Research at Stevens: The Stevens Institute for Artificial Intelligence advances the fundamentals and applications of artificial intelligence and machine learning research to solve complex problems that advance technology — and make the world a better place. Launched in 2018, SIAI is Stevens' newest and largest center. It is comprised of engineering, business, systems and design experts from across the university who share a collaborative research.

Our Research Focus Areas: SIAI serves as an anchor for cross-disciplinary collaboration at Stevens, demonstrating the expertise of numerous affiliated faculty who are working to make AI research a pillar of strength and specialization for the university and it provides a hub for Stevens' wide range of AI education and outreach programs. Our faculty research falls in the following areas:

Brendan Englot, SIAI Director: Dr. Brendan Englot, Professor of Mechanical Engineering and SIAI Director, has fifteen years of experience developing and deploying mobile robots and autonomous navigation algorithms via land, air and sea. His research uses artificial

intelligence to improve the situational awareness of mobile robots operating in degraded conditions, and to enable intelligent robot decision-making under uncertainty. His work in A.I. is supported by the National Science Foundation, the Office of Naval Research, the U.S. Army, and various sponsors in industry.

SIAI Event Showcases Student, Faculty AI Research, Unveils New Mission: Welcome remarks, student research, faculty demos and lecture from industry fuel SIAI's broadened charge to create AI for societal good

New Jersey Center for Microchemical Systems

Description: Stevens Institute of Technology is a student-centric research university, with technology at its core. Our three schools and one college uniquely prepare students for bright futures in diverse fields including tech, finance, medicine, energy, engineering — even art and music.

Additional Details:

Research: Since its foundation in 2002, the New Jersey Center for MicroChemical Systems (NJCMCS) has provided a nationally unique research frontier for exploring microreactor and microfluidic technologies with our industry and government collaborators.

Admission & Aid: Since its foundation in 2002, the New Jersey Center for MicroChemical Systems (NJCMCS) has provided a nationally unique research frontier for exploring microreactor and microfluidic technologies with our industry and government collaborators.

Undergraduate Admissions: Since its foundation in 2002, the New Jersey Center for MicroChemical Systems (NJCMCS) has provided a nationally unique research frontier for exploring microreactor and microfluidic technologies with our industry and government collaborators.

Graduate Admissions: Since its foundation in 2002, the New Jersey Center for MicroChemical Systems (NJCMCS) has provided a nationally unique research frontier for exploring microreactor and microfluidic technologies with our industry and government collaborators.
